## TASK 4

INDEPENDENT AND CORRELATED NESTED QUERIES.

Aim:- To implement Independent and correlated nested subqueries in SQL.

PROCEDURE:-

1. CREATE Table student 3.
2. Insert data to table.
3. Write a Independent nested queries.
4. Execute correlated nested queries.
5. Analyze result.

```
CREATE TABLE STUDENT 3 (
  STU-ID INT PRIMARY KEY,
  NAME VARCHAR(50),
  AGE INT,
  DEPT ID INT);
```

INSERT INTO STUDENTS 3 VALUES.

```
(1, 'Ravi', 20, 101),
(2, 'Rajesh', 19, 102),
(3, 'Radha', 24, 102),
(4, 'Kiran', 23, 101),
(7, 'Sudheep', 22, 101),
```

SELECT \* FROM STUDENTS.

| S.No | STU-ID | NAME  | AGE | DEPT ID |
|------|--------|-------|-----|---------|
| 1.   | 1      | RAVI  | 20  | 101     |
| 2.   | 2      | Sneha | 22  | 101     |
| 3.   | 3      | Anit  | 19  | 102     |
| 4    | 4      | Priya | 24  | 102     |
| 5.   | 5      | kiran | 23  | 101.    |

SELECT NAME, AGE FROM STUDENT 3.  
WHERE AGE > (SELECT AVG (AGE) FROM STUDENT 3.)

| S.NO | NAME  | AGE |
|------|-------|-----|
| 1.   | Sneha | 22  |
| 2.   | Priya | 24  |
| 3.   | kiran | 23. |

SELECT S1.NAME, S1.AGE, S1.DEPTID - C DV related.  
FROM STUDENT 3 S1.  
WHERE S1.AGE > 1

SELECT AVG (S2.AGE)  
FROM STUDENT 3 S2.  
WHERE S1.DEPTID = S2.DEPTID);

| S.NO | NAME  | AGE | DEPTID |
|------|-------|-----|--------|
| 1.   | Sneha | 22  | 101    |
| 2.   | kiran | 23  | 101    |
| 3.   | Priya | 24. | 102.   |

| VELTECH   |  |
|-----------|--|
| REG. NO.  |  |
| DEPT.     |  |
| RESULT    |  |
| VIVA      |  |
| RECORD    |  |
| TOTAL     |  |
| SIGNATURE |  |

11/9/13

Result:- Thus the implementation of the independent  
And correlated nested queries has been verified  
Successfully.
